EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Jack Scherlacher at 213-337-6700 on 11/17/05.

The application has been amended as follows:

- Cancelled claims 17-42

The following is an examiner's statement of reasons for allowance:

- Claims 17-42 are directed to restriction requirement in which a different invention is claimed and are cancelled to put this instant application in condition for allowance.
- The primary reasons for allowance for claims 1-16 are the inclusions of an inkjet printer and printing method comprising head moving pitch-setting means for setting a head moving pitch in the direction along a y-axis, based on a print image width, x-axis relative scan means for causing the relative scan of the printhead along the x-axis, thereby causing printing of maximum m dot lines extending in the direction along the x-axis arranged side by side in the y-axis direction, and y-axis relative scan means for causing the relative

scan of the printhead in the direction along the y-axis, by moving the printhead, after printing by the relative scan of the printhead in the direction along the x-axis. It is these limitations either alone or combined as claimed, that have not been taught, found, or suggested by prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- Kanda (6,695,432) teaches an inkjet printing method that allows a time for ink to penetrate into a medium and to be fixed thereto, and prevents density irregularities.
- Teshigawara et al (6,652,066) teach an inkjet printing method that uses an inter-band data correction process based on thinning to be executed depending on the type of print medium and the number of printing passes.
- Maeda et al (6,779,873) teach an inkjet printing method of printing a high quality color image with no color variations at high speed.
